# **BRAKE PAD CATALOGUE**

## **DISCLAIMER & COPYRIGHT NOTICE**

This catalogue is protected by copyright. Except as authorised by law, this catalogue may not, in part or in whole, be reproduced in any way or stored in any form of data retrieval system, without the express written authorisation of the copyright owner.

Reference to another manufacturer's name or product description is intended for identification and/or reference guide only. Australian Disc Brakes expressly disclaims any representation that it is in any way associated with the manufacture, promotion or sale of the products of any other manufacturer referred to in this catalogue. Without limitation, references to brands such as PBR, Girlock, Girling, Lucas are references only to publicly available data concerning those manufacturers of brake callipers as used in various vehicles.

This catalogue is intended as a guide only. No representation is made that items referred to are necessarily available at any particular time.

While every reasonable effort has been made to compile an accurate catalogue, Australian Disc Brakes expressly disclaims liability and responsibility for use made of the information contained in this catalogue as a consequence of any errors and omissions beyond our reasonable control.

In the interests of seeking to constantly improve this catalogue, the publisher is grateful for any errors and omissions being brought to its attention.

## **COUNTRY OF ORIGIN STATEMENT**

The business of Australian Disc Brakes Pty Ltd is a family business which commenced in Australia in 1961, and the company took over that business in 1967. By 1981 the firm was a world leader in non asbestos brake technology. The company is Australian owned. Since 2003, all of our products are manufactured overseas.

# BRAKE PAD CATALOGUE

## TROUBLESHOOTING INFORMATION

**BRAKE NOISE SQUEAL OR GRIND** Common cause is GLAZED OR WORN ROTORS.

- L Glazed or worn rotors create excessive friction causing the brake material to prematurely glaze continued use will result in excessive friction causing overheating eventually breaking down the formula and causing the resins to burn out and crystallise on the surface then material having lost composition will glaze and become noisy.
- L Grind and/or squeal is one of the most common causes of brake noise. This occurs when a worn rotor is used and the brake pad touches on the edges causing a vibration (noise).  
Always fit new pads to a good set of rotors that are not worn or glazed.

### **BRAKES GRABBING TO ONE SIDE**

Look for low tyre pressures, sticking callipers. Common cause is brakes not releasing and holding on.

### **BRAKE PEDAL LOW**

Look for worn brakes pads or shoes. Common cause is the brake pad or shoes are excessively worn down causing the brake pedal to drop.

### **BRAKE PEDAL SOFT**

Usually sign that there is air in the hydraulic system. Locate air in the system by clamping of each wheel and release one wheel at a time to see if the pedal drops otherwise look to the master cylinder.

**VIBRATION** thru the steering wheel or brake pedal, Look for worn or warped rotors, loose or worn steering and brake components. Common cause of rotor warp is over tightening the wheel nuts and hosing a down a hot rotor during a car wash.

### **IMPORTANT SAFETY FITTING NOTICE**

Brakes are a safety critical part of the vehicle's engineering. We recommend that customers and vehicle owners are always informed as to what is required to ensure that a complete and safe repair is carried out. This will avoid costly comebacks and dissatisfied customers. Replacing new pads with worn rotors will usually lead to complaints.

Australian Disc Brakes recommends that the vehicle manufacturer's advice and recommendations are referred to when replacement and installation of brake pads.
